

Relational Operations - Zero to Hero Questions List

May 26, 2026

1. Check whether one number is greater than another. (*Hint: Use > operator*)
2. Check whether two numbers are equal. (*Hint: Use == operator*)
3. Check whether two numbers are not equal. (*Hint: Use != operator*)
4. Find the greater number between two integers. (*Hint: Use if-else with >*)
5. Find the smaller number between two integers. (*Hint: Use < operator*)
6. Check whether a number is positive. (*Hint: Compare with 0*)
7. Check whether a number is negative. (*Hint: Use < 0*)
8. Check whether a number is zero. (*Hint: Use == 0*)
9. Determine whether a student passed or failed. (*Hint: Compare marks with pass mark*)
10. Check if a person is eligible to vote. (*Hint: Compare age with 18*)
11. Check whether a number is even. (*Hint: Compare remainder with 0*)
12. Check whether a number is odd. (*Hint: Use % and != 0*)
13. Compare the ages of two people. (*Hint: Use > or <*)
14. Check whether a number is less than 100. (*Hint: Use < operator*)
15. Check whether a number is greater than or equal to 50. (*Hint: Use >=*)
16. Determine whether a character is uppercase. (*Hint: Compare ASCII range 'A' to 'Z'*)
17. Determine whether a character is lowercase. (*Hint: Compare ASCII range 'a' to 'z'*)
18. Check whether a character is a digit. (*Hint: Compare '0' to '9'*)
19. Check if a number lies between 1 and 10. (*Hint: Use two comparisons together*)
20. Check whether a number is outside the range 1–100. (*Hint: Use logical OR with comparisons*)
21. Find the largest among three numbers. (*Hint: Use nested if conditions*)
22. Find the smallest among three numbers. (*Hint: Use < comparisons*)
23. Check whether a year is before 2000. (*Hint: Compare year with 2000*)
24. Check whether a temperature is below freezing point. (*Hint: Compare with 0*)
25. Compare salaries of two employees. (*Hint: Use relational operators*)
26. Check whether length and breadth are equal. (*Hint: Use == to identify square*)

27. Determine if a number is divisible by 5. (*Hint: Compare remainder with 0*)
28. Determine if a number is divisible by both 3 and 7. (*Hint: Use % and comparisons*)
29. Check whether a student scored distinction marks. (*Hint: Compare marks with 75 or above*)
30. Compare two floating-point numbers. (*Hint: Use relational operators with float*)
31. Check whether a number is a single-digit number. (*Hint: Compare range -9 to 9*)
32. Check if a person is eligible for a senior citizen discount. (*Hint: Compare age with 60*)
33. Verify whether a number is greater than 1000. (*Hint: Use >*)
34. Compare the speeds of two vehicles. (*Hint: Use if-else*)
35. Determine whether a character comes before 'm'. (*Hint: Character comparison works numerically*)
36. Check whether the entered value is exactly 500. (*Hint: Use ==*)
37. Verify whether two entered passwords are the same. (*Hint: Use strcmp() comparison*)
38. Check if a triangle is valid using side comparisons. (*Hint: Sum of any two sides > third side*)
39. Determine whether a number is within a user-defined range. (*Hint: Use >= and <=*)
40. Check whether a person is eligible for admission based on age criteria. (*Hint: Use relational conditions*)
41. Compare the prices of two products and print the cheaper one. (*Hint: Use < operator*)
42. Determine whether a number is greater than both 10 and 20. (*Hint: Use logical AND*)
43. Check whether a number is less than either 0 or greater than 100. (*Hint: Use logical OR*)
44. Verify whether marks are exactly equal to the cutoff mark. (*Hint: Use ==*)
45. Check whether a character is a vowel by comparing multiple values. (*Hint: Use multiple == conditions*)
46. Determine if the entered month number is valid. (*Hint: Compare range 1-12*)
47. Compare two dates (day numbers only) and print the earlier one. (*Hint: Use < operator*)
48. Check whether a number is a two-digit number. (*Hint: Compare range 10-99*)
49. Determine whether a given ASCII value belongs to alphabets. (*Hint: Compare uppercase and lowercase ranges*)
50. Check whether the entered exam score is greater than the class average. (*Hint: Compare two variables using >*)
